**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 and 21-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (5812368) in view of Sweere et al. (6015120).

Chen discloses a display device comprising a flat display screen; a base portion; support arms coupled to the base portion and a display screen frame for supporting the display screen; and a pivoting assembly allowing for the display screen to be folded into a compact form (Fig. 5), wherein the support arm assembly creates a "Z" shape as the display screen is moved to and from a stored position (Fig. 5).

Chen does not disclose rotating the display device screen from portrait to landscape orientation, and flipping the display from front to back.

Sweere, in the same display art, discloses a display device comprising a pivoting assembly for rotating a display screen from portrait to landscape orientation (for example, assembly 36 Fig. 2) and for flipping the display screen from front to back (for example, 22 and 34 Fig. 2; Figs 7-10). The pivoting assemblies allow the display screen to be rotated 90 degrees and to be flipped 180 degrees. The pivoting assemblies include a compressing spring (810 Fig. 24) or a gas charge piston (25 Fig 1; 525 Fig.

20) for facilitating changing a configuration of the display screen, and a pin (90 Fig. 4) which allows for the rotation of the display screen from portrait to landscape orientation.

In light of Sweere, It would have been obvious to one ordinary skill in the art to use Sweere's pivoting assemblies in Chen's display device because the pivoting assemblies provide additional rotations of the display screen to Chen's display device.

### ***Conclusion***

### ***Response to Arguments***

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
